DATA SHEET

Infor SunSystems Inventory

Track inventory movements across items and warehouses

Infor SunSystems® enables you to better manage inventory by giving you greater control of your inventory levels without forfeiting essential customer service levels. You gain full visibility of product, intermediate, and raw material items—with complete lot and batch control.

The inventory module includes inventory management and traceability, with additional options that include costing, landed costing and cost analysis, and product profiles.

This module tracks inventory movements in and out of different warehouse locations. It includes multiple allocation and costing methods, as well as extensive user-defined analysis capabilities, across items and warehouses.

Product profiling

Product profiling allows for additional characteristics to be tracked against inventory receipts and issues, even though the information is not significant enough (such as item color) to include a separate record in the item master.

Support your digital transformation

- Infor OS serves as the underlying technology platform of Infor SunSystems—ensuring that systems work seamlessly together
- With a modern, conversational user experience, the inventory module is more intelligent, intuitive, and delivers greater value
- The solution is cloud-enabled to react quickly to ever-evolving industry and market changes

Item definition

- Provide a wide range of associated information for analysis with the item master
- Update item details with additional descriptions
- Define a range of acceptable values on characteristics recorded against an item
- Set up holds on multiple prices for each item
- Hold multiple cost values—such as standard, actual, and average costs—using different currencies
- Produce rolled-up standard costs for manufactured items using standard costs for each item defined in the bill of materials
- Record employee details against an item for selective processing
- Define units of measure, their descriptions, and conversion calculations
- Set rules to allow item codes to be superseded by other item codes
- Attach a definition of resources to product definitions

Advanced costing

Use advanced costing when the inventory costing needs to be more than just the latest, the average, or the standard by item. This option provides features such as weighted average cost calculations by item, by warehouse, by condition, and more.

Movement management

- Track movement entry to a record-wide range of data on inventory changes
- Set up a bin-to-bin transfer facility, respecting storage characteristics of new locations
- Define different transfer order types to provide greater levels of detail
- Create user-defined forms for transfer orders to suit organizational requirements
- Support multiple warehouses and types of storage locations (zones)
- Enable support for different storage characteristics

Inventory processes

- Set up automatic or manual inventory allocation facilities
- Take advantage of a range of options for printing movements
- Select flexible inventory control—either automatic or manual
- Enable FIFO, FEFO, and LIFO allocation and batch control
- Create serial numbers for low or high volume
- Perform inventory inquiries to examine actual and projected movements by multiple inventory units
- Search for fulfillment of sales and works orders
- Track the movement inquiry associated with particular references
- Print picking lists and dispatch documents as required
- Confirm receipts picked or dispatched by location, lot, and/or serial number
- Save goods receipts for matching/inspection
- Perform traceability/batch reporting
- Perform an inventory count or stock-take management
- Create a system-generated inventory count (random or full)
- Print sequentially numbered tickets to assist counting control
- Create a security-controlled entry of inventory count for discrepancies, approvals, and posting
- Clear previously generated inventory counts
- Display inventory count information with the inquiry function

Costing

- Track weighted, true, and defined averages; standard, actual, latest actual, user defined, and landed costs
- Create movement cost records with a snapshot of item costs
- Perform updates with information from movement definitions

Reporting on inventory

A wide range of reports are available, including:

- Movement analysis and listings
- Inventory listings, status, evaluation, usage, and cover
- Expired items
- Inventory count listings and valuation

Integrations

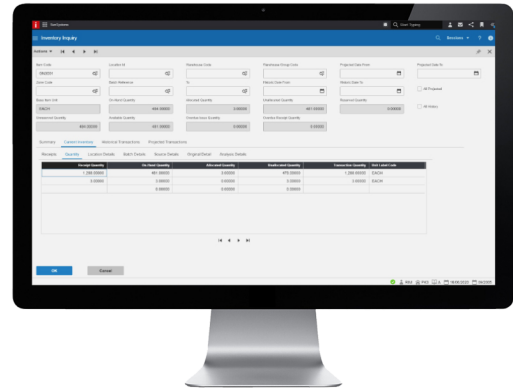

- Create custom workflows and alerts via Infor OS integration
- Import inventory movement transactions from other systems
- Export selected movements to a transfer file
- Upload inventory counts from hand-held data entry units and match/approve them
- Generate and download stock lists to hand-held data entry units
- Map the movement or transfer of orders to the ledger
- Leverage integrated mobile functionality

Global visibility and control

Gain full visibility and control of inventory, while maintaining customer service levels, with Infor® SunSystems. You get lot and batch control, traceability, multiple costing options, analysis, and product profiles to access your inventory data quickly.
